

Object Oriented Programming (OOPs)

- Everything is represented in the form of Objects
- Objects are instances of classes
- Class is like a blueprint, object is a real thing built from that blueprint

OOPs Principles

- Encapsulation
- Abstraction
- Inheritance
- Polymorphism

```
int age = 25;  
printDetails(age);  
  
int a = 40;
```

- Everything is represented in the form of Objects
- Objects are instances of classes
 - Class is like a blueprint, object is a real thing built from that blueprint

OOPs Principles

- Encapsulation
- Abstraction
- Inheritance
- Polymorphism

```
int age = 25;  
printDetails(age);
```

```
int a = 40;
```

Class: User

```
name  
age  
orderFood()  
setReminders()
```

Class is a blueprint for objects
Class has properties and behaviours

Class is a blueprint for objects
Class has properties and behaviours
